

Verticale Packaging Machine LV300, heavy duty bagwidth: 25mm - 150mm

Cat.: LV300-HD

Article ID: 10758

Description

The LV300-HD is a bag packing machine producing bags out of flat foil up to a width of 300mm, folding it on a forming shoulder and a filling tube. The goods are fed by the filling tube into the bag. By sending the starting signal the machine is welding a bag and preparing a new one. It could be produced single bags as well as bag chains. The width of the bag is defined by the width of the foil and the filling tube/forming shoulder, the bag length could be adjusted nearly at will at the machine.

The machine can be fed by goods manually as well as by half-automatic count-weight-tables, fully automatic weighing- and counting constructions.

Specification

Weight:	28 kg
Length:	550 mm
Width:	600 mm
Frame:	stainless steel
Power supply:	230V 50Hz, 400W
Feeding height:	750 mm
Speed:	up to 28 bags/min depending to the bag length
Bag width:	30 mm - 150 mm
Bag length:	40 mm - endless
Film thickness:	30 µm - 150 µm
Film width:	60 mm - 300 mm
Film types:	flat film PE - film PE - antistatic PE - corrosion-resistant laminated film
Standard Facilities:	Adjustable bag length in mm, Bag with perforation, Manual and automatic operation, Safety circuit on end seal unit (Jaw), Filling on to closed end seal unit (Jaw), Fall down time, Cooling time.
Additional Features:	Bag chain with settable bag number, Double bags with variable bag length.
Options:	Foot switch for machine cycle start, Piece counter, Print registration system for use on printed film, Serial link to a PC, Automatic feeding and counting systems, Thermal transfer printer and labeling systems.
